EDUCATION

University of Guelph *Sept 2024 – Present*
Bachelors of Computer Engineering

- **Relevant Courses:** Engineering Design & Analysis, OOP Java, Mechanics, Digital Systems, Signal Processing, Software Arch.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C++, HTML/CSS, SQL, MATLAB, JSON, Bash, Swift

Developer/Design Tools: VS Code, Android Studio, Jupyter Notebook, Jira, Microsoft Power Apps, Slack, Git, GitHub, Docker, AWS, Azure, ChatGPT, Claude, Copilot, Cursor, Figma, SOLIDWORKS, AutoCAD, XCode

Technologies/Frameworks: React, React Native, Node.js, Express.js, Nest.js, Supabase, Google Colab, Firebase, Flask, PostgreSQL, Postman, Insomnia, Expo, MongoDB, GraphQL, Jest, PyTorch, TensorFlow, Numpy, Pandas, REST APIs, Tailwind CSS, Next.js

EXPERIENCE

Welbilt Inc. *Mississauga , ON*
AI Solutions & Product Management *May 2026 – Present*

- Led **12+ AI, automation, and analytics initiatives** across 5 business functions, turning stakeholder needs into deployable tools
- Built **AI agents and data workflows** with Power Apps, Copilot Studio, Claude, Salesforce, APIs, and Excel for analysis and reporting
- Led the Smart Dispatch AI initiative, using equipment and Salesforce data to deliver troubleshooting guidance in **10–30 secs**
- Coordinated **Automated Warranty Claims Platform**, leading requirements/UAT across **9,000+ claims**, cutting review time **70%.**
- Owned an **agentic AI market-intelligence product** for **35+ strategic accounts**, automating earnings, competition and industry news
- Built **5+ reliability-monitoring pipelines** tracking equipment failures, high service-call rates, and new product units to surface issues

Moves *Toronto, ON (Remote)*
AI Product, Strategy and Market Development *May 2026 – Sept 2026*

- Led **market intelligence & expansion analysis** across Toronto/Boston, assessing **40+ locations** to guide **GTM expansion strategy**
- Evaluated **5 core user journeys**, identifying adoption barriers and converting friction into prioritized **product and UX improvements**
- Developed **AI product concepts** using preferences, location, and crowdsourced data to improve personalization and discovery
- Benchmarked **15+ local discovery platforms** to shape positioning, differentiation, market entry, and **user acquisition strategy**

Weve *Toronto, ON*
Software Engineer (Full Stack) *May 2025 – Aug 2025*

- Built full-stack event platform **(React Native, Expo, Node.js, Express, Supabase/PostgreSQL)** for **150+ beta users** on iOS/Web
- Built an **AI-powered event matching** with scoring and Twilio SMS, boosting **30% increase** in successful matches
- Developed real-time event map with pins, filters, and voting, improving **event discovery and user participation by 20%**
- Engineered **secure RESTful APIs** with validation and rate limiting, reliably handling **1000+ beta requests**

PROJECTS

SafeVision – Computer Vision Monitoring | *Python, YOLOv8, OpenCV, FastAPI, PostgreSQL, React*

- Built a **real-time PPE compliance platform** using YOLOv8, OpenCV, and ByteTrack, detecting **4 PPE classes at 94% accuracy**
- Engineered a **FastAPI/PostgreSQL** incident pipeline processing **5,000+ detection events** with alerts and resolution tracking
- Developed a **React safety dashboard** tracking **6+ compliance KPIs** across violations, locations, and historical trends
- Implemented **object tracking, Docker, testing, and CI/CD**, reducing duplicate alerts by **80%** and enabling reproducible deployment

Customer Intelligence & AI Evals Platform | *TypeScript, Next.js, Supabase, Python, OpenAI API*

- Created a **customer intelligence platform** analyzing **1,000+ reviews** for sentiment, pain points, trends, and recommendations
- Built **AI eval suite** with **100+ failure tests and a custom rubric**, comparing **4 NLP/LLM models** on quality, F1, latency, and cost
- Engineered **Python ETL and Supabase workflows** for multi-company datasets, historical analysis, and **human-in-the-loop review**
- Designed a **Next.js dashboard** tracking **6+ quality metrics**, model regressions, sentiment trends, and emerging issues

Garland Agentic Research Engine | *Copilot Studio, Claude, Power Automate, SharePoint, Excel, HTML*

- Engineered **multi-agent workflows** to ingest, classify, summarize, and route market data across automated research pipelines
- Automated **earnings and competitor monitoring across 35+ accounts**, analyzing filings, calls, transcripts, and investor updates
- Built **prompt and classification pipelines** for customer, industry, and product signals, cutting **manual research** and surfacing trends
